

POST ASSESEMENT
SECTION B — VERY SHORT QUESTIONS

Instructions: Answer each question in brief. Each question carry 1 mark.

1. **What is Pandas mainly used for in data analysis?**
2. **What is NumPy mainly used for?**
3. **What is Matplotlib used for?**
4. **What is Seaborn used for?**
5. **What is Plotly used for?**
6. **What is the standard alias used for Pandas?**
7. **What is the standard alias used for NumPy?**
8. **Which Pandas object is commonly used to represent tabular data?**
9. **Which Pandas function is used to load a CSV file?**
10. **Which Pandas method is used to display the first few rows of a DataFrame?**
11. **Which Pandas method is used to display the last few rows of a DataFrame?**
12. **Which DataFrame attribute returns its number of rows and columns?**
13. **Which DataFrame attribute displays the column names?**
14. **Which Pandas method provides descriptive statistics of numerical columns?**
15. **Which Pandas method is used to detect missing values?**
16. **Which Pandas method is used to remove rows containing missing values?**
17. **Which Pandas method is used to fill missing values?**
18. **What is the purpose of the groupby() function in Pandas?**
19. **What is the purpose of the sort_values() method?**
20. **What does pd.merge() do?**
21. **What does pd.concat() do?**
22. **Which Pandas function is used to convert a column into datetime format?**
23. **What is np.where() used for?**
24. **What does sns.heatmap() display?**
25. **Name the library commonly used to visualize missing-value patterns.**
